| Hazardous polymerisation | Not known to occur. |

Section 11: Toxicological Information

Inhalation: Inhalation of vapours or aerosols (mists, fumes), generated by the material during the course of normal handling, may be harmful.

Ingestion: Harmful if swallowed

Abamectin: Oral LD50 11 mg/kg (rat), 14 mg/kg (mouse)

Skin: The liquid may be miscible with fats or oils and may degrease the skin, producing a skin reaction described as non-allergic contact dermatitis. May cause skin irritation on prolonged contact. Is a contact sensitiser.

Eye: May cause transient discomfort and redness following eye contact.

Injection: Effects may vary in severity according to the quantity involved, from localised site reaction (pain, redness, swelling) to a more acute systemic reaction.

Chronic Effects: There is limited evidence that skin contact with this product is more likely to cause a sensitisation reaction in some persons compared to the general population. Sensitisation may result in allergic dermatitis responses including rash, itching, hives or swelling of extremities.

Reproductive Toxicity: There is some evidence from animal testing that exposure to this material may result in toxic effects to the foetus, and may be harmful to development of breast-fed children.

Mutagenicity: Not considered to be carcinogenic, based on the results of animal studies.

Carcinogenicity: Not considered to be carcinogenic, based on the results of animal studies.
