

Ballance Agri-Nutrients

Version No: 8.1
Safety Data Sheet according to the Health and Safety at Work (Hazardous Substances) Regulations 2017

Issue Date: 07/03/2022 Print Date: 10/03/2022 L.GHS.NZL.EN.E

SECTION 1 Identification of the substance / mixture and of the company / undertaking

Product Identifier

Product name	Cropzeal 16N
Chemical Name	Not Applicable
Chemical formula	Not Applicable
Other means of identification	Not Available

Relevant identified uses of the substance or mixture and uses advised against

Relevant identified uses	Fertiliser
Relevant luentilleu uses	renniser.

Details of the supplier of the safety data sheet

Registered company name	Ballance Agri-Nutrients
Address	161 Hewletts Rd Mount Maunganui New Zealand
Telephone	+64 800 222 090
Fax	Not Available
Website	www.sealeswinslow.co.nz
Email	sales@sealeswinslow.co.nz

Emergency telephone number

5	
Association / Organisation	CHEMCALL
Emergency telephone numbers	Freephone: 0800 CHEMCALL (0800 243 622) (24 Hours/ 7 Days)
Other emergency telephone numbers	Not Available

SECTION 2 Hazards identification

Classification of the substance or mixture

Considered a Hazardous Substance according to the criteria of the New Zealand Hazardous Substances New Organisms legislation. Not regulated for transport of Dangerous Goods.

Classification ^[1]	Acute Toxicity (Oral) Category 4, Skin Corrosion/Irritation Category 2, Serious Eye Damage/Eye Irritation Category 2, Specific Target Organ Toxicity - Single Exposure (Respiratory Tract Irritation) Category 3, Hazardous to Terrestrial Vertebrates
Legend:	1. Classification by vendor; 2. Classification drawn from CCID EPA NZ; 3. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI
Determined by using GHS/HSNO criteria	6.1D (oral), 6.3A, 6.4A, 9.3C, 6.1E (respiratory tract irritant)

Label elements		
Hazard pictogram(s)		
Signal word	Warning	

H302	Harmful if swallowed.
H315	Causes skin irritation.
H319	Causes serious eye irritation.
H335	May cause respiratory irritation.
H433	Hazardous to terrestrial vertebrates.

Precautionary statement(s) Prevention

P271	Use only outdoors or in a well-ventilated area.	
P261	Avoid breathing dust/fumes.	
P264	Wash all exposed external body areas thoroughly after handling.	
P270	Do not eat, drink or smoke when using this product.	
P280	Wear protective gloves, protective clothing, eye protection and face protection.	

Precautionary statement(s) Response

P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P337+P313	If eye irritation persists: Get medical advice/attention.
P301+P312	IF SWALLOWED: Call a POISON CENTER/doctor/physician/first aider if you feel unwell.
P302+P352	IF ON SKIN: Wash with plenty of water and soap.
P304+P340	IF INHALED: Remove person to fresh air and keep comfortable for breathing.
P330	Rinse mouth.

Precautionary statement(s) Storage

P405	Store locked up.	
P403+P233	Store in a well-ventilated place. Keep container tightly closed.	

Precautionary statement(s) Disposal

P501 Dispose of contents/container to authorised hazardous or special waste collection point in accordance with any local regulation.

SECTION 3 Composition / information on ingredients

Substances

See section below for composition of Mixtures

Mixtures

CAS No	%[weight]	Name
7783-28-0	30-60	diammonium phosphate
7783-20-2	30-60	ammonium sulfate
7447-40-7	10-30	potassium chloride
Legend:	 1. Classification by vendor; 2. Classification drawn from CCID EPA NZ; 3. Classification drawn from Regulation (EU) No 1272/2008 - Annex VI; 4. Classification drawn from C&L * EU IOELVs available 	

SECTION 4 First aid measures

Description of first aid measures

Eye Contact	 If this product comes in contact with the eyes: Wash out immediately with fresh running water. Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids. Seek medical attention without delay; if pain persists or recurs seek medical attention. Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.
Skin Contact	 If skin contact occurs: Immediately remove all contaminated clothing, including footwear. Flush skin and hair with running water (and soap if available). Seek medical attention in event of irritation.
Inhalation	 If fumes or combustion products are inhaled remove from contaminated area. Lay patient down. Keep warm and rested. Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures. Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary. Transport to hospital, or doctor, without delay.
Ingestion	 If swallowed do NOT induce vomiting. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration. Observe the patient carefully. Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious. Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink. Seek medical advice.

Page 3 of 10

Cropzeal 16N

Continued...

Treat symptomatically.

- For acute or short term repeated exposures to ammonia and its solutions:
- Mild to moderate inhalation exposures produce headache, cough, bronchospasm, nausea, vomiting, pharyngeal and retrosternal pain and conjunctivitis. Severe inhalation produces laryngospasm, signs of upper airway obstruction (stridor, hoarseness, difficulty in speaking) and, in excessively, high doses, pulmonary oedema.
- Warm humidified air may soothe bronchial irritation.
- ▶ Test all patients with conjunctival irritation for corneal abrasion (fluorescein stain, slit lamp exam)
- Dyspneic patients should receive a chest X-ray and arterial blood gases to detect pulmonary oedema.

SECTION 5 Firefighting measures

Extinguishing media

- There is no restriction on the type of extinguisher which may be used.
- Use extinguishing media suitable for surrounding area.

Special hazards arising from the substrate or mixture

Fire Incompatibility Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may result

•	
Fire Fighting Alert Fire Brigade and tell them location and nature of hazard. Wear breathing apparatus plus protective gloves in the event of a fire. Prevent, by any means available, spillage from entering drains or water courses. Use fire fighting procedures suitable for surrounding area. DO NOT approach containers suspected to be hot. Cool fire exposed containers with water spray from a protected location. 	
Fire/Explosion Hazard	 Non combustible. Not considered a significant fire risk, however containers may burn. Decomposes on heating and produces toxic fumes of: carbon monoxide (CO) carbon dioxide (CO2) hydrogen chloride phosgene hydrogen fluoride nitrogen oxides (NOx) phosphorus oxides (NOx) phosphorus oxides (POx) sulfur oxides (SOx) other pyrolysis products typical of burning organic material. May emit poisonous fumes. May emit corrosive fumes.

SECTION 6 Accidental release measures

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

Minor Spills	 Clean up all spills immediately. Avoid contact with skin and eyes. Wear impervious gloves and safety glasses. Use dry clean up procedures and avoid generating dust. Vacuum up (consider explosion-proof machines designed to be grounded during storage and use). Do NOT use air hoses for cleaning Place spilled material in clean, dry, sealable, labelled container.
Major Spills	 Moderate hazard. CAUTION: Advise personnel in area. Alert Emergency Services and tell them location and nature of hazard. Control personal contact by wearing protective clothing. Prevent, by any means available, spillage from entering drains or water courses. Recover product wherever possible.

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 Handling and storage

Precautions for safe handling

Safe handling	 Avoid all personal contact, including inhalation. Wear protective clothing when risk of exposure occurs. Use in a well-ventilated area. Prevent concentration in hollows and sumps. DO NOT enter confined spaces until atmosphere has been checked. DO NOT allow material to contact humans, exposed food or food utensils. 	
Other information	 Store in original containers. Keep containers securely sealed. Store in a cool, dry, well-ventilated area. Store away from incompatible materials and foodstuff containers. 	

Page 4 of 10

Cropzeal 16N

Continued...

- Protect containers against physical damage and check regularly for leaks.
 Observe manufacturer's storage and handling recommendations contained within this SDS.

Conditions for safe storage, including any incompatibilities

•	•••
Suitable container	 Glass container is suitable for laboratory quantities DO NOT use mild steel or galvanised containers DO NOT use unlined steel containers DO NOT use aluminium or galvanised containers Polyethylene or polypropylene container. Check all containers are clearly labelled and free from leaks.
Storage incompatibility	 Phosphates are incompatible with oxidising and reducing agents. Phosphates are susceptible to formation of highly toxic and flammable phosphine gas in the presence of strong reducing agents such as hydrides. Partial oxidation of phosphates by oxidizing agents may result in the release of toxic phosphorus oxides. Avoid strong bases.

Х - Must not be stored together

0 - May be stored together with specific preventions

- May be stored together +

Note: Depending on other risk factors, compatibility assessment based on the table above may not be relevant to storage situations, particularly where large volumes of dangerous goods are stored and handled. Reference should be made to the Safety Data Sheets for each substance or article and risks assessed accordingly.

SECTION 8 Exposure controls / personal protection

Control parameters

Occupational Exposure Limits (OEL)

INGREDIENT DATA

Not Available

Emergency Limits

Ingredient	TEEL-1	TEEL-2		TEEL-3
diammonium phosphate	20 mg/m3	210 mg/m3		1,300 mg/m3
ammonium sulfate	13 mg/m3	140 mg/m3		840 mg/m3
Ingredient	Original IDLH		Revised IDLH	
diammonium phosphate	Not Available		Not Available	
ammonium sulfate	Not Available		Not Available	
potassium chloride	Not Available		Not Available	

Occupational Exposure Banding

· · · · · · · · · · · · · · · · · · ·				
Ingredient	Occupational Exposure Band Rating	Occupational Exposure Band Limit		
diammonium phosphate	E ≤ 0.01 mg/m ³			
ammonium sulfate	E	≤ 0.01 mg/m³		
Notes:	Occupational exposure banding is a process of assigning chemicals into specific categories or bands based on a chemical's potency and the adverse health outcomes associated with exposure. The output of this process is an occupational exposure band (OEB), which corresponds to a range of exposure concentrations that are expected to protect worker health.			

MATERIAL DATA

Exposure controls

Appropriate engineering controls	Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection. The basic types of engineering controls are: Process controls which involve changing the way a job activity or process is done to reduce the risk. Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment. Ventilation can remove or dilute an air contaminant if designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use.			
Personal protection				
Eye and face protection	 Safety glasses with side shields. Chemical goggles. Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. 			
Skin protection	See Hand protection below			

Hands/feet protection	The selection of suitable gloves does not only depend on the material, but also on further marks of quality which vary from manufacturer to manufacturer. Where the chemical is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. The exact break through time for substances has to be obtained from the manufacturer of the protective gloves and has to be observed when making a final choice. Personal hygiene is a key element of effective hand care. Gloves must only be worn on clean hands. After using gloves, hands should be washed and dried thoroughly. Experience indicates that the following polymers are suitable as glove materials for protection against undissolved, dry solids, where abrasive particles are not present. polychloroprene. houty I rubber. butyl rubber. polyvinyl chloride.
Body protection	See Other protection below
Other protection	 Overalls. P.V.C apron. Barrier cream. Skin cleansing cream. E ve wash unit

Respiratory protection

Particulate. (AS/NZS 1716 & 1715, EN 143:2000 & 149:001, ANSI Z88 or national equivalent)

Required Minimum Protection Factor	Half-Face Respirator	Full-Face Respirator	Powered Air Respirator
up to 10 x ES	P1 Air-line*	-	PAPR-P1 -
up to 50 x ES	Air-line**	P2	PAPR-P2
up to 100 x ES	-	P3	-
		Air-line*	-
100+ x ES	-	Air-line**	PAPR-P3

* - Negative pressure demand ** - Continuous flow

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

· Respirators may be necessary when engineering and administrative controls do not adequately prevent exposures.

• The decision to use respiratory protection should be based on professional judgment that takes into account toxicity information, exposure measurement data, and frequency and likelihood of the worker's exposure - ensure users are not subject to high thermal loads which may result in heat stress or distress due to personal protective equipment (powered, positive flow, full face apparatus may be an option).

• Published occupational exposure limits, where they exist, will assist in determining the adequacy of the selected respiratory protection. These may be government mandated or vendor recommended.

Certified respirators will be useful for protecting workers from inhalation of particulates when properly selected and fit tested as part of a complete respiratory protection program.
 Where protection from nuisance levels of dusts are desired, use type N95 (US) or type P1 (EN143) dust masks. Use respirators and components tested and approved under appropriate government standards such as NIOSH (US) or CEN (EU)

· Use approved positive flow mask if significant quantities of dust becomes airborne.

· Try to avoid creating dust conditions.

SECTION 9 Physical and chemical properties

Information on basic physical and chemical properties

Appearance	Gray, brown, white, yellow or red particles; insoluble in water.				
Physical state	Divided Solid	Relative density (Water = 1)	1-1.3		
Odour	Not Available	Partition coefficient n-octanol / water	Not Available		
Odour threshold	Not Available	Auto-ignition temperature (°C)	Not Applicable		
pH (as supplied)	Not Applicable	Decomposition temperature	Not Available		
Melting point / freezing point (°C)	>130	Viscosity (cSt)	Not Available		
Initial boiling point and boiling range (°C)	Not Available	Molecular weight (g/mol)	Not Applicable		
Flash point (°C)	Not Applicable	Taste	Not Available		
Evaporation rate	Not Applicable	Explosive properties	Not Available		
Flammability	Not Applicable	Oxidising properties	Not Available		
Upper Explosive Limit (%)	Not Applicable	Surface Tension (dyn/cm or mN/m)	Not Applicable		
Lower Explosive Limit (%)	Not Applicable	Volatile Component (%vol)	Not Applicable		
Vapour pressure (kPa)	Not Applicable	Gas group	Not Available		
Solubility in water	Immiscible	pH as a solution (Not Available%)	Not Available		
Vapour density (Air = 1)	Not Applicable	VOC g/L	Not Available		

SECTION 10 Stability and reactivity

Reactivity	See section 7
Chemical stability	 Unstable in the presence of incompatible materials. Product is considered stable. Hazardous polymerisation will not occur.
Possibility of hazardous reactions	See section 7
Conditions to avoid	See section 7
Incompatible materials	See section 7
Hazardous decomposition products	See section 5

SECTION 11 Toxicological information

Information on toxicological effects

Accidential ligestion of the material may be damaging to the health of the individual. Sulfate sails are poorly absorbed from the gastronicestical race to be accurate of comocic activity are able to draw water from the lumen to produce darrheea (purple). Sulfate ion usually has title toxicological potential. Prophotes are solvy and incompletely absorbed from the gastronicestical tract and are unlikely (other than in abuse) to produce the systemic effects which occur when introduced by other routes. Such effects include voninite, lethany, feer, darrhoea, fuels in blood pressure, slow pulse, cyanosis, capel spacer, cours and termination and the systemic body. Ingestion Ingestion of arge amounts of phosphate saits (over 1 gm for an adult) may produce osmotic catharsis resulting in diarrhoes and probably, adocrinital carap. Large doeses (4-8 gm) will alimost containly produce these effects in motion. Ingestion of amoge amounts of phosphate saits (over 1 gm for an adult) may produce osmotic catharsis resulting in diarrhoes and probably, adocrinital carap. Large doeses of ammonium saits may produce a diarrhoea. Were tage doese of ammonium saits may produce a diarrhoea in analy doese. Ingestion of ammonia and the output in advance avista, or practical diarresis and systemic produce a diarrhoea (ammonia and contain of a crinical flicker traino. Such a clinical picture resembles that found in terminal intervel of individuals. Botopring contain, analy and doese. Static Contact The material produces main diarrhoea diarrhoea evista, or practical experience produce, diarrhoea, and in terminal intervel to individuals belowing direct trains. Such a dimansis for up to four hours), such inflammatin the dine oposoure point. S	Inhaled	Evidence shows, or practical experience predicts, that the material produ individuals, following inhalation. In contrast to most organs, the lung is at irritant and then repairing the damage. The repair process, which initially may however, produce further lung damage resulting in the impairment or irritation often results in an inflammatory response involving the recruitme system. Persons with impaired respiratory function, airway diseases and condition if excessive concentrations of particulate are inhaled. If prior damage to the circulatory or nervous systems has occurred or if k conducted on individuals who may be exposed to further risk if handling i The highly irritant properties of ammonia vapour result as the gas dissolu Inhalation of the ammonia fumes causes coughing, vomiting, reddening of can cause temporary blindness, restlessness, tightness in the chest, pull Inhalation of high concentrations > 5000 ppm may cause breathing difficulty exposure to high concentrations > 5000 ppm may cause death due to as Prolonged or regular minor exposure to the vapour may cause persistent ammonia exposures may produce chronic airway hyperactivity and asthr	Ices irritation of the respiratory system, in a substantial number of ble to respond to a chemical insult by first removing or neutralising the evolved to protect mammalian lungs from foreign matter and antigens, of gas exchange, the primary function of the lungs. Respiratory tract ent and activation of many cell types, mainly derived from the vascular ins such as emphysema or chronic bronchitis, may incur further disability kidney damage has been sustained, proper screenings should be and use of the material result in excessive exposures. ves in mucous fluids and forms irritant, even corrosive solutions. of lips, mouth, nose, throat and conjunctiva while higher concentrations monary oedema (lung damage), weak pulse and cyanosis. y, tightness in chest, pulmonary oedema and lung damage. Brief iphyxiation (suffocation) or fluid in the lungs. t irritation of the eyes, nose and upper respiratory tract. Massive ma with associated oulmonary function chances.
Sulfate selbs are poorly absorbed from the gastroin-intestinal income to be accurace of comotic activity are able to draw water from the lumen to produce diarhoes (ourging). Sulfate ion usually has little toxicological potential. Impection Phosphates are as only and incomplexely absorbed from the gastrointestinal tart and are unlikely (other than in abuss) to produce the systemic effects which occur when introduced by other routes. Such effects incular vomining, lethangy (retur, diarhoes, nullei holod pressure, slow pulse, organosis, carpai spasm, coma and teliany). These effects in nucle vomining, lethangy (retur, diarhoes, nullei holod pressure, slow pulse, organosis, carpai spasm, coma and teliany). These effects result following sequestration of blod calcium. Impection Insection of animotic activity produce these effects result following sequestration of blod pressure, slow pulse, organosis, carpai spasm, comos and testino y route cells appeard it is most individuals. Most of the ingested self will be excreted in the faces of harmonium salts may produce local initiation, nasses, vorting and diarhoes. Very large desse of annonium salts may produce a described to produce direcisis and systemic ammonium policining. Such as and theready such a clinical picture resembles that dout in terminal liver failure - discribed deroptical belows of ammonium as alter may produce local initiation of the salts and produe facilities fusion. Such a clinical picture resembles that ond in terminal liver failure - discribed to produce direcisis and systemic ammonium basis may produce and described clivels of ammonium as alter may produce systemic toxicity. The matterial produce more after the end of the exposure period. Skin Constal File matterial concernities on the skin in a substantial number of indinviduals following intex of an advilling interval wer		Accidental ingestion of the material may be damaging to the health of the	e individual.
Properties are slowly and incompletely absorbed from the gasterinestinal tract and are unlikely (other tima in abuze) to produce the systemic effects which occur when introduced by other routes. Such effects include vamining, letting, there, fails in blood pressure, slow pulse, organosis, caranaj spasm, coma and tethyn. These effects include vamining, letting, there, fails in blood pressure, slow pulse, organosis, caranaj spasm, coma and tethyn. These effects include vamining, letting, there, fails in blood pressure, slow pulse, organosis, caranaj spasm, coma and tethyn. These effects include vamining, letting, there are effects in most individuals. Most of the ingested sail will be excreted in the taces of healthy individuals without producing systemic toxicit. Impestion Ingestion of large amounts of phosphate sails (over 1 gm for an abult) may produce scombic atherasis: neaveling and damona and carana and probably, advances effects appear if this mechanism is orverheading that been and individuals. Most of the instema senial closes in fination of amonium sails may produce local initiation, nausea, voming and damoha. Very large does of ammonium sails may produce to cardination, nausea, voming and damoha. Very large does of ammonium sails may produce and produce flace fusion. Such a clinical picture resembles that found in terminal liver failure - elevated level does and produce flace fusion. Such a clinical picture resembles that found in termination of the sails and produce flace theory in the sain (produce). Such inflatom and sails in a substantial number of individuals for up to to hours), such inflatomation being present wenty-four hours or more after the end of the exposure predice. The sain (programs) and and threading and the sain partice the termination of the sain in a substantial number of individuals. Repeated or produce is applied to the header and a separate sparate in the sain (programs) and and threading and threader and the separate prod		Sulfate salts are poorly absorbed from the gastro-intestinal tract but beca diarrhoea (purging). Sulfate ion usually has little toxicological potential.	ause of osmotic activity are able to draw water from the lumen to produce
Ingestion Ingestion of large amounts of phosphate saits (over 1 gm for an aduit) may produce osmotic catharsis resulting in diarhoea and probably, abdominal camp. Large doses (4-8 gm) will almost certainly produce these fiftes in most individuals. Most of the ingested sait will be excreted in the faces of bhattiny individuals without produced lives (2000). Human metabolism allows detoxilication of ammonia, however toxic effects appear if this mechanism is overwhelmed by other than small doses. Ingestion of ammonia as this may produce location, spasmin citoxicity. Human metabolism allows detoxilication of ammonia, however toxic effects appear if this mechanism is overwhelmed by other than small doses. Large doses of ammonium asits may be calificative, vonting and diarrhoea. Very large doses of ammonium asits may produce a dot produce direction of focal muscles, treamoni, active produce and dot present very large doses of ammonium asits may be calificative value in machine the interval and the produce field insufficient value of the calification prantysis and the semiconary and or citicati fuel to reduce and contrast interval entervalue of the observation appear on a dot or the altervalue value in the material enter - elevated levels of ammonia are found regularly in advanced liver disease. Skin Contract The material produces mild similation: value estis, or practical experience predicts, that the material enter - produces mild information of the exposure period. Skin intration: value experience predicts, that the material entervalue in a form of contact dormatic (nonalinergic). The tervate and the epidemis. Intration: value experience predicts, may produce estist, or practical experience predicts, may produce estist, or practical experience predicts. Skin Contact Evidence exists, or practical experience predicts, that the material enthe exposy protected. </th <th></th> <td>Phosphates are slowly and incompletely absorbed from the gastrointestin effects which occur when introduced by other routes. Such effects includ cyanosis, carpal spasm, coma and tetany. These effects result following</td> <td>nal tract and are unlikely (other than in abuse) to produce the systemic le vomiting, lethargy, fever, diarrhoea, falls in blood pressure, slow pulse, sequestration of blood calcium.</td>		Phosphates are slowly and incompletely absorbed from the gastrointestin effects which occur when introduced by other routes. Such effects includ cyanosis, carpal spasm, coma and tetany. These effects result following	nal tract and are unlikely (other than in abuse) to produce the systemic le vomiting, lethargy, fever, diarrhoea, falls in blood pressure, slow pulse, sequestration of blood calcium.
Skin Contact The material produces mild skin irritation; evidence exists, or practical experience predicts, that the material either produces significant, but mild, inflammation of the askin in a substantial number of individuals following direct contact, and/or produces significant, but mild, inflammation when applied to the healthy intact skin of animals (for up to four hours), such inflammation being present twenty-four hours or more after the end of the exposure; this may result in a form of contact dermattik (nonallergic). The dermattik is often characterised by skin redness (erythema) and swelling (oedema) which may progress to bistering (vesiculation), scaling and hitckening of the epidermis. Itritation and skin reactions are possible with sensitive skin Concuts, abraded or initiated skin should not be exposed to this material Entry into the blood-stream through, for example, cuts, abrasions, puncture wounds or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected. Eve Evidence exists, or practical experience predicts, that the material may cause eight and use any external damage is suitably protected. Chronic Long-term exposure to respiratory irritants may result in disease of the airways involving difficul toreathing and related systemic problems. Limited evidence suggests that repeated or long-term acybacite and or on X-ray. Dog given daily dose of sodum phosphate dibasic for 9-22 weeks showed actioum depositis in the kindney (nephrocalcinosis) with disseminated atrophy of the proximal tubule. Animals fed on sodium phosphate dibasic for 9-22 weeks showed actalum depositis in the kindney	Ingestion	Ingestion of large amounts of phosphate salts (over 1 gm for an adult) m abdominal cramp. Large doses (4-8 gm) will almost certainly produce the in the faeces of healthy individuals without producing systemic toxicity. Human metabolism allows detoxification of ammonia, however toxic effect Ingestion of ammonium salts may produce local irritation, nausea, vomitit drop in blood pressure, collapse, central nervous system disorders, spas Large doses of ammonium salts may be sufficiently absorbed to produce described after parenteral administration of the salts and produce flaccid impairment of motor performance, recognition and of critical flicker fusior elevated levels of ammonia are found regularly in advanced liver disease	ay produce osmotic catharsis resulting in diarrhoea and probably, ese effects in most individuals. Most of the ingested salt will be excreted cts appear if this mechanism is overwhelmed by other than small doses. ng and diarrhoea. Very large doses of ammonium salts may produce a sms, narcosis, respiratory paralysis and haemolysis. e diuresis and systemic ammonia poisoning. Such poisonings have been ity of facial muscles, tremor, generalised discomfort, anxiety and n. Such a clinical picture resembles that found in terminal liver failure - e.
Evaluate the skin plot to the due of the material and ensure that any external damage is suitably protected. Eye Evidence exists, or practical experience predicts, that the material may cause eye irritation in a substantial number of individuals. Repeated or prolonged eye contact may cause inflammation (similar to windburn) characterised by a temporary redness of the conjunctiva (conjunctivitis); temporary impairment of vision and/or other transient eye damage/ulceration may occur. Chronic Long-term exposure to respiratory irritants may result in disease of the airways involving difficult breathing and related systemic problems. Limited evidence suggests that repeated or long-term occupational exposure may produce cumulative health effects involving organs or biochemical systems. Chronic Long-term exposure to high dust concentrations may cause changes in lung function (i.e. pneumoconiosis) caused by particles less than 0.5 micron penetrating and remaining in the lung. A prime symptom is breathlessness. Lung shadows show on X-ray. Dogs given daily doses of sodium phosphate dibasic for 9-22 weeks showed calcium deposits in the kidneys (nephrocalcinosis) with disseminated atrophy of the proximal tubule. Animals fed on sodium phosphate dibasic and potassium dihydrogen phosphate, in both short- and long-term studies, showed increased bone porosity; hyperparathyroidism and soft tissue calcification were also evident. Prolonged or repeated skin contact may cause drying with cracking, irritation and possible dermatitis following. Cropzeal 16N TOXICITY IRRITATION Not Available Not Available	Skin Contact	 The material produces mild skin irritation; evidence exists, or practical experience predicts, that the material either produces mild inflammation of the skin in a substantial number of individuals following direct contact, and/or produces significant, but mild, inflammation when applied to the healthy intact skin of animals (for up to four hours), such inflammation being present twenty-four hours or more after the end of the exposure period. Skin irritation may also be present after prolonged or repeated exposure; this may result in a form of contact dermatitis (nonallergic). The dermatitis is often characterised by skin redness (erythema) and swelling (oedema) which may progress to blistering (vesiculation), scaling and thickening of the epidermis. At the microscopic level there may be intercellular oedema of the sping layer of the skin (spongiosis) and intracellular oedema of the epidermis. Irritation and skin reactions are possible with sensitive skin Open cuts, abraded or irritated skin should not be exposed to this material Entry into the blood-stream through, for example, cuts, abrasions, puncture wounds or lesions, may produce systemic injury with harmful effects. 	
Eye Evidence exists, or practical experience predicts, that the material may cause eye initiation in a substantian number of individuals. Repeated or prolonged eye contact may cause inflammation (similar to windburn) characterised by a temporary redness of the conjunctiva (conjunctivitis); temporary impairment of vision and/or other transient eye damage/ulceration may occur. Chronic Long-term exposure to respiratory irritants may result in disease of the airways involving difficult breathing and related systemic problems. Chronic Long term exposure to high dust concentrations may cause changes in lung function (i.e. pneumoconiosis) caused by particles less than 0.5 micron penetrating and remaining in the lung. A prime symptom is breathlessness. Lung shadows show on X-ray. Dogs given daily doses of sodium phosphate dibasic for 9-22 weeks showed calcium deposits in the kidneys (nephrocalcinosis) with disseminated atrophy of the proximal tubule. Animals fed on sodium phosphate dibasic and potassium dihydrogen phosphate, in both short- and long-term studies, showed increased bone porosity; hyperparathyroidism and soft tissue calcification were also evident. Prolonged or repeated skin contact may cause drying with cracking, irritation and possible dermatitis following. Cropzeal 16N TOXICITY IRRITATION Not Available Not Available	Еуе	Evidence exists, or practical experience predicts, that the material may c prolonged eye contact may cause inflammation (similar to windburn) cha temporary impairment of vision and/or other transient eye damage/ulcere	ause eye irritation in a substantial number of individuals. Repeated or iracterised by a temporary redness of the conjunctiva (conjunctivitis); ation may occur.

DIAMMONIUM PHOSPHATE	No significant acute toxicological data identified in literature search.		
AMMONIUM SULFATE	for ammonium sulfate As ammonium sulfate dissociates in biological systems studies with other ammonium and sulfate salts can be used to cover these endpoints: A screening study according to OECD TG 422 with ammonium phosphate as analogue substance, which forms ammonium ions in aqueous solutions is available. Fully valid fertility studies with analogue compounds containing sulfate ions are however lacking. Two limited studies with sodium sulfate can be used for assessment of fertility and developmental toxicity, however, in none of these studies have the foetuses been examined histologically. There are no in vivo data on genotoxicity for ammonium sulfate. To bridge the data gap, data for ammonium chloride, which dissociates in aqueous media to form ammonium ions, as does ammonium sulfate, will be used. In aqueous media, ammonium sulfate dissociates in the ammonium and sulfate ions (NH4+, SO4 2-). These can be taken up into the body by the oral and respiratory routes.		
POTASSIUM CHLORIDE	The material may be irritating to the eye, with prolonged contact causing inflammation. Repeated or prolonged exposure to irritants may produce conjunctivitis.		
DIAMMONIUM PHOSPHATE & AMMONIUM SULFATE	Asthma-like symptoms may continue for months or even years after exposure to the material ceases. This may be due to a non-allergenic condition known as reactive airways dysfunction syndrome (RADS) which can occur following exposure to high levels of highly irritating compound. Key criteria for the diagnosis of RADS include the absence of preceding respiratory disease, in a non-atopic individual, with abrupt onset of persistent asthma-like symptoms within minutes to hours of a documented exposure to the irritant. A reversible airflow pattern, on spirometry, with the presence of moderate to severe bronchial hyperreactivity on methacholine challenge testing and the lack of minimal lymphocytic inflammation, without eosinophilia, have also been included in the criteria for diagnosis of RADS. RADS (or asthma) following an irritating inhalation is an infrequent disorder with rates related to the concentration of and duration of exposure to the irritating substance. Industrial bronchitis, on the other hand, is a disorder that occurs as result of exposure due to high concentrations of irritating substance (often particulate in nature) and is completely reversible after exposure ceases.

DO NOT discharge into sewer or waterways.

Persistence and degradability

Ingredient	Persistence: Water/Soil	Persistence: Air
ammonium sulfate	HIGH	HIGH
potassium chloride	HIGH	HIGH

Bioaccumulative potential

Ingredient	Bioaccumulation
ammonium sulfate	LOW (LogKOW = -2.2002)
potassium chloride	LOW (LogKOW = -0.4608)

Mobility in soil

Ingredient	Mobility
ammonium sulfate	LOW (KOC = 6.124)
potassium chloride	LOW (KOC = 14.3)

SECTION 13 Disposal considerations

Product / Packaging disposal DO NOT allow wash water from cleaning or process equipment to enter drains. It may be necessary to collect all wash water for treatment before disposal. In all cases disposal to sewer may be subject to local laws and regulations and these should be considered first. Where in doubt contact the responsible authority. Recycle wherever possible. Consult manufacturer for recycling options or consult local or regional waste management authority for disposal if no suitable to disposal facility can be identified. Dispose of by: burial in a land-fill specifically licensed to accept chemical and / or pharmaceutical wastes or Incineration in a lice apparatus (after admixture with suitable combustible material) Decontaminate empty containers. Observe all label safeguards until containers are cleaned and destroyed. 	reatment or rensed

Ensure that the hazardous substance is disposed in accordance with the Hazardous Substances (Disposal) Notice 2017

- Bioconcentration Data 8. Vendor Data

Disposal Requirements

Packages that have been in direct contact with the hazardous substance must be only disposed if the hazardous substance was appropriately removed and cleaned out from the package. The package must be disposed according to the manufacturer's directions taking into account the material it is made of. Packages which hazardous content have been appropriately treated and removed may be recycled.

The hazardous substance must only be disposed if it has been treated by a method that changed the characteristics or composition of the substance and it is no longer hazardous. Only dispose to the environment if a tolerable exposure limit has been set for the substance.

Only deposit the hazardous substance into or onto a landfill or sewage facility or incinerator, where the hazardous substance can be handled and treated appropriately.

SECTION 14 Transport information

Labels Required	
Marine Pollutant	NO
HAZCHEM	Not Applicable

Land transport (UN): NOT REGULATED FOR TRANSPORT OF DANGEROUS GOODS

Air transport (ICAO-IATA / DGR): NOT REGULATED FOR TRANSPORT OF DANGEROUS GOODS

Sea transport (IMDG-Code / GGVSee): NOT REGULATED FOR TRANSPORT OF DANGEROUS GOODS

Transport in bulk according to Annex II of MARPOL and the IBC code

Not Applicable

Transport in bulk in accordance with MARPOL Annex V and the IMSBC Code

Product name	Group

Russia - FBEPH	Yes
Legend:	Yes = All CAS declared ingredients are on the inventory No = One or more of the CAS listed ingredients are not on the inventory. These ingredients may be exempt or will require registration.

SECTION 16 Other information

Revision Date	07/03/2022
Initial Date	02/09/2008

SDS Version Summary

Version	Date of Update	Sections Updated
7.1	20/08/2021	Classification change due to full database hazard calculation/update.
8.1	07/03/2022	Appearance, Classification, Disposal, Environmental, Exposure Standard, Toxicity and Irritation (Other)

Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.
